

Buttons,
Multidimensional

A button is the purest atomic expression of a system's visual style. It combines the "big three" attributes— color, typography, and iconography — into a non-splittable atomic part. Buttons also provoke discussion of space: padding inside (particularly, to a label's left and right) and margin outside (adjacent to other elements). Buttons are leading representations of our system's style.

Variant properties

- Icon: False, True (L1), True (R1), True (L1-R1), True (Icon Only)
- State: Default, Pressed, Disabled
- Size: Small, Large
- Button width is variable / height is fixed
